

## Native Perennials for Pollinator Gardens.

Pollinators include bees, beetles, flies, butterflies, moths, hummingbirds, and even bats provide a valuable service. They pollinate the plants that we use for food, as well as the plants we use to beautify our yards. We can help them by providing native plants. Many insects need specific host plants to lay their eggs on, for food for the larvae. Use this palette of plants to create a beautiful and interesting garden. The colors, shapes and textures of the plants are themselves an attractive addition to your garden. In addition, you will create an opportunity to enjoy watching the butterflies, moths, birds and other wildlife that your native habitat attracts.

### Plants for Pollinator Gardens

**Plants for Sunny areas** - The following are plants that would work for you when starting a pollinator garden in the sun. They provide color and either food or are a host plant for various insects.

[Great Blue Lobelia](#)
